

Welcome Ranch

Morgan Horses and Boston Terriers

“Bostons for Best Friends”

Thank You for adding a DeNovo Boston to your family.

We strive to insure that you and your dog will enjoy a long and happy partnership.

We warranty our pups against hereditary juvenile cataracts, heart malformations, hip dysplasia, megaesophagus, inguinal hernias, congenital deafness, cleft lip/palette and other recognized hereditary or congenital problems. We advise your veterinarian examine your pup within 2 weeks after it comes home. Any pups that show these congenital problems may be returned for a refund or exchange within the first 12 months after purchase provided you bring us a letter and a copy of your medical records/x-rays from your veterinarian. Occasionally a juvenile Boston pup will develop a rash or hair loss caused by Demodex mites. If your vet discovers this we will provide the necessary advice, shampoo and medication at our cost. Please consult with us immediately regarding any medical problems your pup might have. We really care! We are anxious that our pups stay happy and healthy, and that you are an overjoyed member of the growing Welcome Ranch/ De Novo Bostons family.

Before you take your puppy home we will have given it initial vaccinations and worming. These first vaccines are helpful but do not provide solid protection against contagious disease.

It is your responsibility to:

1. Continue regular vaccines at your vet until the puppy series is complete (vaccinations required at approximately 8, 12 and 16 weeks of age).
2. Not expose your pup to places / people / pets that could carry disease. Do not take your pup to pet stores, groomers, kennels, shelters, public parks or any place with a lot of dog traffic until the vaccine series is complete. You can even carry viruses on your clothing/shoes so be careful of what animals you handle and what you step in!

The Parvo virus (which can kill pups) is particularly tough and can live on a lawn, contaminated toys or clothing for up to 12 months and still be infectious. Parvo infection is usually expressed as inappetance, depression, vomiting and bloody diarrhea, progressing to shock and death if untreated, and sometimes even if it is. It incubates 3-5 days from exposure to illness. Hence we guarantee our pups to be free from signs of parvo (and distemper) virus infections for the first 3 days from purchase.

We want you to love your DeNovo Boston and we hope your experience with us is quite positive. We welcome your phone calls, inquiries from you and are happy to help you however we can.

Companion Puppy purchased without papers	No
